

Chicken Eggs

Geewin Exim is one of the leading merchant exporters dealing in shell eggs of supreme quality. The white and brown shell eggs offered by us possess a thick albumin and a dark yellow colour yolk. Besides the white shell eggs and brown shell eggs, we are engaged in exporting and supplying the premium range of poultry eggs that are available in various sizes and weights as per the needs of the customers. Our poultry eggs are in great demand in the worldwide markets owing to their premium quality.

Our poultry hatching eggs are tested in various parameters such as bird flu, salmonella infection and other contamination. Eggs are all-natural and packed with a number of nutrients. One egg has 13 essential vitamins and minerals in varying amounts, high-quality protein, unsaturated fats and antioxidants, all for 70 calories.

How to test if an egg is fresh:

There are two main way in which you can test an egg to see. Whether or not it is fresh.

NUTRITION

Eggs provide significant amounts of vitamins and minerals, and are also an excellent source of high quality proteins. The high protein in egg helps build and repair the cells in muscles and other body tissues. Our egg is also enriched with vitamin 'A' which is good for healthy skin, bones and eyes.

We ensure that the eggs are graded, cleaned and stamped with a quality seal and packed in pulp cardboard carton, using stringent standards. Egg contain vitamins ADE K, and the 'B' complex vitamins.

Description

The egg is the most complete food available in nature. it is the most widely used natural ingredient for food processing . Egg protein is of such high quality that it is used as the standard by which other proteins are compared. Eggs have a biological value (efficacy with which protein is used for growth of 93.7% . Comparable values are 84.5% for milk, 76% for fish , and 74.3% for beef.)
